

## *OptiLinQ FSMR-1 IR Receiver*

The Full Spectrum Plasma-Friendly Micro Receiver (FSMR-1) was designed to repeat IR codes and reject noise generated by Plasma televisions. The FSMR-1 was developed and tested several years ago with a cross-section of Plasma TVs popular at the time. Even today, its signal processing circuitry allows it to function very effectively with Plasmas.

Recently, Sony, Sharp and other manufacturers have released LCD screens that produce strong IR interference which is not rejected by the FSMR-1. Used with these new LCDs, the FSMR-1 talkback LED lights solidly, making IR control virtually impossible.

Please note the FSMR-1 will simply not work under these conditions. At this time, Sonance does not offer an LCD-proof IR receiver.
